

## TOUCH SCREEN TICKET DISPENSER

---

### DESCRIPTION

---

This touch screen ticket dispenser has been invented to get the clients attention for those services and activities which are available at the given clients office. The number of the visualisable services aren't limited and it's easy to change them. The datas of the given services are visualised clearly under each other. The clients can have their tickets after choosing one (or more) of these services.

There is a possibility to install other unique hardware components on this terminal like: a magnetic- or chip card reader.

A web-configurational surface helps us to set the parameters and to configure the system. We can grant the permits, which are necessary to this on the application surface.

### TECHNICAL DATAS

---

Height:	1510 mm
Width:	500 mm
Depth:	130 mm
Mass:	35 kg
Width of sole:	600 mm
Depth of sole:	280 mm
Power supply:	200V-240V ~50/60Hz

### BASIC CONFIGURATION

---

- 17" or 19" touch screen TFT-LCD monitor
- Built-in mini ITX
- 512 Mbyte RAM
- 80 GB HDD
- 1000-3000 Mhz Processor
- 10/100 Mbit Ethernet
- 80 mm high speed thermal printer with a cutter
- Possible operation systems: Microsoft Millennium 2000,XP 2000, Vista
- Database and configurational manager: XAMPP 1.6.1 (only on the dispenser)
